EDUCATION

Polytechnic University of the Philippines—Manila, B.S. in Electronics Engineering

Mar 2019 - Sep 2023

Achievements: Rank 3 (90.70%) April 2024 Electronics Engineering Licensure Exam (3rd out of 3,130 examinees)

Relevant Coursework: Computer Programming, Emerging Technologies (Cloud Computing), Data Communications (Networking)

TECHNICAL SKILLS

Cloud & IaC: AWS (EC2, ECS/Fargate, EKS, Lambda, RDS/Aurora, S3, VPC, ALB, Route53, IAM, CloudWatch), Terraform

Containers & Orchestration: Docker, Kubernetes, Helm

CI/CD: GitHub Actions, GitLab CI, ArgoCD

Scripting & Languages: Python (Boto3), Bash, SQL

WORK EXPERIENCES

NMBLR AI (formerly Talino Labs / Amihan Global Strategies)

Ortigas, Pasig

Cloud DevOps Engineer | AWS, Kubernetes, Terraform, GitHub Actions, Docker, Bash, Git

Oct 2024 - Present

- Contributed to AWS cost reduction initiative that **cut monthly spend by 26%** (\$36.5k → \$27k) by closing unused accounts, migrating 7 EKS clusters from Extended to Standard Support, and rightsizing over-provisioned resources across 13 AWS accounts.
- Co-engineered the **company's first AWS Well-Architected multi-account landing zone** using AFT, implementing a centralized Hub-and-Spoke network topology that enforced **100% IaC coverage** to eliminate manual configuration and drift.
- Provided **infrastructure support for AI Engine and Data Platform integration**, provisioning and configuring **10+ AWS services** (Bedrock, API Gateway, Lambda, ECS Fargate, EFS, RDS, Step Functions, VPC, IAM, CloudWatch) to enable LLM streaming features, ML model orchestration, and high-performance data pipelines across sandbox and production environments.
- Executed the EKS to ECS Fargate migration to **mitigate 6x Extended Support costs** and eliminate manual node patching, serving as the main technical POC to document and train TechOps and Dev teams on the **company's first serverless container strategy**.
- Standardized **infrastructure deployment for 6 ventures** (Asenso, Bahai Deals, Sakai Deals, SFC+ SMDC, PTI-NMBLR, PTI-RLC), managing end-to-end configuration of Helm values, GitHub Actions workflows, Route53 DNS, ALB routing, RDS/Aurora databases, S3 buckets, and TLS certificates across shared and isolated environments.
- Enhanced application security by **remediating VAPT vulnerabilities**, deploying AWS WAF with managed and custom rule sets for bot/fraud protection, and implementing path-based access controls at the ALB level.
- Migrated **15 fintech microservices** for BayaniPay from legacy GitLab to GitHub Actions, refactoring outdated pipelines and standardizing deployment workflows to align with company CI/CD practices.
- Performed **critical SSL certificate renewals** for BDO Unibank's RPT and Payroll systems (Production/UAT), ensuring regulatory compliance with **zero downtime**.

CERTIFICATIONS

AWS Certified Cloud Practitioner | Amazon Web Services (AWS)

May 2024 - May 2027

- Verify: https://www.credly.com/badges/c6b9b65c-6c54-4b50-8d04-2f1225735e3c/public_url
